WIRED CONTROLLER

Serie
ACCD_WC

Models
ACCD_WC5
ACCD_WC6

To Users

Thank you for selecting Daitsu product. Please read this instruction manual carefully before installing and using the product, so as to master and correctly use the product. In order to guide you to correctly install and use our product and achieve expected operating effect, we hereby instruct as below:

(1) This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsibility for their safety. Children should be supervised to ensure that they do not play with the appliance.

(2) This instruction manual is a universal manual; some functions are only applicable to particular product. All the illustrations and information in the instruction manual are only for reference, and control interface should be subject to actual operation.

(3) In order to make the product better, we will continuously conduct improvement and innovation. If there is adjustment in the product, please subject to actual product.

(4) If the product needs to be installed, moved or maintained, please contact our designated dealer or local service center for professional support. Users should not disassemble or maintain the unit by themselves, otherwise it

daitsu

may cause relative damage, and our company will bear no responsibilities.

This marking indicates that this product should not be disposed with other household wastes throughout the EU. To prevent possible harm to the environment or human health from un-controlled waste disposal, recycle it responsibly to promote the sustainable reuse of material resources. To return your used device, please use the return and collection systems or contact the retailer where the product was purchased. They can take this product for environmental safe recycling.

1 Safety Notices (Please be sure to abide them)

⚠ **WARNING:** If not abide them strictly, it may cause severe damage to the unit or the people.

⚠ **NOTE:** If not abide them strictly, it may cause slight or medium damage to the unit or the people.

🚫 This sign indicates that the items must be prohibited. Improper operation may cause severe damage or death to people.

❗ This sign indicates that the items must be observed. Improper operation may cause damage to people or property.

⚠ **WARNING!**

This product can't be installed at corrosive, inflammable or explosive environment or the place with special requirements, such as kitchen. Otherwise, it will affect the normal operation or shorten the service life of the unit, or even cause fire hazard or serious injury. As for the above special places, please adopt special air conditioner with anti-corrosive or anti-explosion function.

2 Operation Notices

- The power supply for all indoor units must be unified.
- Prohibit installing the wired controller at wet or sunshine places.
- Do not knock, throw or frequently disassemble the wired controller.
- Do not operate the wired controller with wet hands.

- This product is applicable to VRF unit, Big Duct Type unit, Air-cooled Packaged unit and Atlas unit whose outdoor unit and indoor unit communicate with each other by live line and neutral line.
- When two wired controllers control one (or more) indoor unit(s), the address of wired controller should be different.
- Functions with "*" are optional for indoor units. If a function is not included in an indoor unit, wired controller can't set the function, or setting of this function is invalid to the indoor unit.
- Please pay attention to below items when matching with VRF unit:
  - ■ When the system mode priority is the master-slave mode, in one system network, you must set one indoor unit as the master indoor unit, other indoor units are slave indoor units.
  - ■ When the system mode priority is the master-slave mode, the operation mode of the system is basing on that of the master indoor unit. The master indoor unit can be set to any mode (including auto mode), while the slave indoor unit can't set to the mode that conflicts with the system mode.
  - ■ When the system mode priority is: Cooling mode is prioritized, heating mode is prioritized, first-set mode is prioritized, or last-set mode is prioritized. The indoor unit can be set to any mode (excluding auto mode). The indoor unit will automatically switch to the system mode, when the operation mode of the indoor unit conflicts with the system operation mode.
  - ■ When the system mode priority is the voting mode (indoor unit's capacity is prioritized / number of indoor units is prioritized). The indoor unit can be set to any mode (excluding the

auto mode). The indoor unit will be stopped, when the operation mode of the indoor unit conflicts with the system operation mode after voting.

■ System mode priority defaults to master-slave mode, and only certain units have other system mode priorities.

4.1 Instruction of wired controller

4.1.1 Requirements for model selection of communication wire

$L = L01 + L02 + L1 + L2 + \ldots + L(n-1)(n \leq 16)$
Fig. 4.3 Length of communication wire

daitsu

Wire material type	Total length L (m/feet)	Wire size (mm²/AWG)	Material standard	Remarks
Light/ Ordinary Polyvinyl chloride sheathed cord. (60227 IEC 52 /60227 IEC 53)	L≤250m (L≤820- 1/5 feet)	2×0.75 mm² ~ 2× 1.25 mm² (2×AWG18 ~ 2×AWG16)	IEC 60227- 5:2007	(1) Total length of communication line can't exceed 250m (820-1/5feet). (2) The cord shall be Circular cord (the cores shall be twisted together). (3) If unit is installed in places with intense magnetic field or strong interference, it is necessary to use shielded wire.

4.1.2 Requirements for Installation

    (1)   It is not allowed to install the wired controller in the wet place.

    (2)   It is not allowed to install the wired controller in the place with direct sunlight.

    (3)   It is not allowed to install the wired controller near the high-temperature object or the place is likely to be spattered with water.

4.1.3 Requirements for Wired Connection

Network connecting methods between wired controller and indoor unit are as below:

Outdoor unit

❶ D1 D2 OR
N(1) 2 3 ⏚
❷ H1 H2
Indoor unit

Fig. 4.4 one wired controller controls one indoor unit

daitsu

Instruction for wire connection:

(1) The wiring methods in fig. 4.4, fig. 4.5, fig. 4.8 and fig. 4.9 can be adopted for the wired controller connecting Atlas unit.

(2) The wiring methods in fig. 4.4~fig. 4.7 can be adopted for the wired controller connecting VRF unit.

(3) Only the wiring methods in fig. 4.4 and fig. 4.5 can be adopted for the wired controller connecting Big Duct Type unit or Air-cooled Packaged unit, that is, one (or two) wired controller(s) can control only one indoor unit, cannot control multiple indoor units of different systems.

(4) When one (or two) wired controller(s) control(s) multiple indoor units simultaneously, the wired controller can connect to any one indoor unit, but the connected indoor unit must be the same series indoor unit. The total quantity of indoor unit controlled by wired controller can't exceed 16 sets, and the connected indoor unit must be within the same indoor unit's network. Wire controller must set quantity of group control indoor units. Please refer to 4.2.3 Parameter Setting "P14".

(5) When two wired controllers control one (or more) indoor unit(s), the addresses of those two wired controllers should be different. Please refer to 4.2.3 Parameter Setting "P13".

(6) The terminal of the wire controller is non-polarized and cannot be connected to strong electric.

NOTE: Wired controller ACCD_WC6 only supports one (or more) indoor unit(s) controlled by one wired controller.

4.1.4 Installation
Fig. 4.10 Installation of Wired Controller

Fig. 4.10 shows a simple installation course of wired controller, and the following points should be noted:

daitsu

(1)   Before installation, please cut off the power supply of indoor unit, it is not allowed to operate with power supply;

(2)   Pull out the 2-core twisted pair inside the installation hole in the wall, and thread the wire through the hole in the back of soleplate of wired controller;

(3)   Stick the soleplate of wired controller on the wall, and use Self-tapping Screw ST3.9×25 MA or screw M4×25 to fix the soleplate with the installation hole of wall;

(4)   Connect the 2-core twisted pair to wiring terminal H1 and H2, and then tighten the screw;

(5)   Arrange the wires in the back of panel, and then buckle the panel of wired controller with the soleplate of wired controller.

4.1.5 Disassembly
Fig. 4.11 Disassembly of wired controller

4.2 Commissioning

4.2.1 Set Master Indoor Unit

Under Off status, long press "MODE" button for 5s to set the corresponding indoor unit of wired controller as master indoor unit. If the system mode priority is the master-slave mode, "⟨⟩" icon will be light after finishing setting.

NOTES:

① There is a master indoor unit in a system, other slave indoor units can be set as master unit, in which case, the original master unit will become a slave unit.

② This function is not applicable to partial units.

4.2.2 Parameter Enquiry

Unit parameters can be checked in unit On or Off status.

(1) Long press "FUNCTION" button for 5s to enter the interface of viewing unit parameters. "C00" is displayed in temperature zone.

(2) Press "+" or "-" button to select parameter code.

(3) Press "ENTER" button to return to last step until exits viewing parameters.

The parameter enquiry list is as following:

daitsu

Table 4.1 Parameters viewing list

Parameter code	Parameter name	Parameter range	Viewing method
C01	View the project number of indoor unit and locate the faulted indoor unit	1-255; Project number of online indoor unit	Press "MODE" button in "C01" status. Press "+" or "-" button to select the project number of indoor unit. The current selected indoor unit will beep. Temperature zone: displays error codes of the current indoor unit. Timer zone: displays present indoor unit project number. **NOTES:** 1) System will not exit "C01" viewing automatically. User has to exit this interface manually. 2) Partial units which have no buzzer will not beep.

Parameter code	Parameter name	Parameter range	Viewing method
C03	View the indoor unit quantity of the system network*	1-100	Timer zone: display indoor unit quantity of the system.
C06	View priority operation*	00: normal operation 01: priority operation	Operation method: Enter viewing: press "MODE" button in "C06" status to enter the interface of viewing priority operation. Press "+" or "-" button to select indoor unit. Display method: Temperature zone: displays current indoor unit project number. Timer zone: displays current priority operation setting value of indoor unit.

Parameter code	Parameter name	Parameter range	Viewing method
C07	View indoor ambient temperature	—	Enter viewing: press "MODE" button in "C07" status. Press "+" or "-" button to select indoor unit. Temperature zone: displays current indoor unit project number. Timer zone: displays indoor ambient temperature.
C08	View Filter Clean Reminder time	4-416: days	Timer zone: displays Filter Clean Reminder time.
C09	View address of wired controller	01, 02	Timer zone: displays the address of wired controller.

Parameter code	Parameter name	Parameter range	Viewing method
C11	View the indoor unit quantity	1-16	Timer zone: displays the indoor unit quantity controlled by the wired controller.
C12	View outdoor ambient temperature	—	Timer zone: displays outdoor ambient temperature.
C17	View indoor relative humidity	0~100: relative humidity 0%~100%	Press "MODE" button to enter into the review interface of indoor relative humidity under "C17" status. Press "+" or "-" button to switch the number of indoor unit. Temp area: display current indoor unit's project number. Timer zone: display indoor relative humidity.

daitsu

Parameter code	Parameter name	Parameter range	Viewing method
C18	One-button viewing of indoor unit project number*	1-255: Project Number of online indoor unit	Press "MODE" button in "C18" status to turn on the function of one-button viewing indoor unit project code. Press "+" or "-" button to select the indoor unit. Temperature zone: displays number of the current indoor unit. Timer zone: displays project number of indoor unit. **NOTES:** 1) After turning on the one-button viewing function, each wired controller of the entire system will display the project number of its controlling indoor unit on its timer zone. 2) Slave wired controller cannot view "C18".

Parameter code	Parameter name	Parameter range	Viewing method
C18	One-button viewing of indoor unit project number*	1-255: Project Number of online indoor unit	Cancel method: 1) If user exits the "C18" interface manually, the one-button viewing function will be immediately turned off. 2) If system exits the "C18" interface due to no action in 20 seconds, user has to press the "⏻" button under on/off status to cancel this function. 3) After the one-button viewing function is turned on, pressing the "⏻" button of any wired controller of the same system network under on/off status will cancel this function.

Parameter code	Parameter name	Parameter range	Viewing method
C20	View the air outlet temperature of Fresh Air Indoor Unit*	—	Enter viewing, short-press "MODE" button in "C20" status. Press "+" or "-" button to select the indoor unit. Temperature zone: displays current indoor unit project number. Timer zone: displays air outlet temperature of Fresh Air Indoor Unit. **NOTE:** Only applicable to Fresh Air Indoor Unit.
C23	Version inquiry	—	Timer zone: program version of the current wired controller.

NOTES:

① Under parameter viewing status, "FAN", "TIMER", and "SWING" buttons are invalid. Press "⏻" button to go back to the homepage, while not to turn on/off the unit.

② Under parameter viewing status, the signal from remote controller is invalid.

4.2.3 Parameter Setting

Unit parameters can be set in unit On or Off status.

(1) Long press "FUNCTION" button for 5s and the temperature zone displays "C00"; long press "FUNCTION" button for another 5s to enter the interface of setting wired controller parameters. "P00" is displayed in temperature zone;

(2) Press "+" or "-" button to select parameter code. Press "MODE" button to enter parameter setting. At that time, parameter value is blinking. Press "+" or "-" button to adjust the parameter value and press "ENTER" button to finish setting.

(3) Press "ENTER" button to return to last step until exists setting parameters.

The parameter setting list is as following:

Table 4.2 Parameter setting list

Parameter code	Parameter name	Parameter range	Default value	Note
P10	Set master indoor unit*	00: do not change current master/slave state 01: set current indoor unit as master indoor unit	00	When set the corresponding indoor unit of wired controller as master indoor unit, the "⟲" icon will be bright after finishing setting. **NOTE:** not applicable to partial units.

Parameter code	Parameter name	Parameter range	Default value	Note
P11	Set infrared receiver of wired controller	00: forbidden 01: activated	01	—
P13	Set address of wired controller	01: master wired controller 02: slave wired controller	01	Assistant wired controller (02) is without unit parameter setting function except setting its address.
P14	Set quantity of group control indoor units	00: forbid this function 01-16: indoor unit quantity	01	Set the corresponding value according to the connected indoor unit quantity.
P16	Set unit of temperature	00: Celsius 01: Fahrenheit	00	—

Parameter code	Parameter name	Parameter range	Default value	Note
P30	Set static pressure of indoor fan motor	01-09: static pressure level of indoor fan motor	05	—
P31	High ceiling installation*	00: standard ceiling 01: high ceiling	00	Only applicable to partial cassette units.
P33	Set Timer*	00: general timer 01: clock timer	00	**NOTE:** not applicable to partial units.
P34	Clock Timer repetition is valid*	00: once 01: repeat everyday	01	Available only when timer is set to clock timer. **NOTE:** not applicable to partial units.

daitsu

Parameter code	Parameter name	Parameter range	Default value	Note
P37	Cooling setting temperature under auto mode*	17°C~30°C (63°F~86°F)	25°C (77°F)	When the temperature unit is °C, cooling setting temperature minus heating setting temperature ≥1°C. When the temperature unit is °F, cooling setting temperature minus heating setting temperature ≥2°F.
P38	Heating setting temperature under auto mode*	16°C~29°C (61°F~84°F)	20°C (68°F)	
P43	Set priority operation*	00: normal operation 01: priority operation	00	When power supply is insufficient, the indoor units which are set to priority operation can operate, while other indoor units are forced to be turned off.

Parameter code	Parameter name	Parameter range	Default value	Note

P74	When inserting the card, whether to resume to previous status	00: no 01: yes	01	When it is set as 00, it will keep the status after inserting the gate control card, that is, if it is OFF status when pulling out the card, when inserting the card, it is still OFF status.
P76	PM2.5 filter function*	00: invalid 01: valid	00	—
P78	Cold air prevention time setting of indoor unit*	00: 180s 01: 300s 02: 420s 03: 600s	00	—

daitsu

Parameter code	Parameter name	Parameter range	Default value	Note
P82	Set time format	00: 24-hour 01: 12-hour	00	When it is set as 01 and the timer setting way is clock timer, the system time in the homepage will be displayed in 12 hour-clock with the AM/PM indicator.
P83	Temperature control method under cooling mode	00: Ambient temperature control 01: Body sensing temperature control	01	**NOTE:** Only applicable to the unit with I-FEEL function.
P84	Dry mode control method	00: Temperature control 01: Humidity control	00	**NOTE:** Only applicable to the unit with humidity control function under Dry mode.
Parameter code	Parameter name	Parameter range	Default value	Note
P85	Set temperature of humidity control under Dry mode	10ºC~30ºC (50°F~86°F)	16ºC (61°F)	**NOTE:** Only applicable to the unit with humidity control function under Dry mode.
P86	Auto clean mode	01: Normal 02: Quick 03: Deep	01	**NOTE:** Only applicable to the unit with auto clean function.
P87	Interval of Set temperature in Celsius	00: 1°C 01: 0.5°C	01	01: The set temperature will be adjusted at 0.5°C. 00: The set temperature will be adjusted at 1°C.

NOTES:

① Under parameter setting status, "FAN", "TIMER" and "SWING" button are invalid. Press "⏻" button to go back to home page, but not turning on/off the unit.

② Under parameter setting status, the signal from remote controller is invalid.

daitsu

5 Operation Instructions

5.1 ON/OFF

Press "$\bigcirc$" button to turn on the unit. Press "$\bigcirc$" button again to turn off the unit. The interfaces of "ON/OFF" status are shown in fig. 5.1 ~ 5.2.
Fig. 5.1 Interface of On status

Fig. 5.2 Interface of Off status

5.2 Mode Setting

Under On status, pressing "MODE" button can set mode circularly as:

OR
NOTES:

① The available modes are different for different models, the wired controller will automatically select mode setting range according to the model of indoor unit.

② When the wired controller controls VRF unit and the system mode priority is the master-slave mode, only the master indoor unit can set the auto mode.

③ Under Auto mode, if the indoor unit is running under Cooling, the icons "Ⓐ" and "❄" will light up; if the indoor unit is running under Heating, the icons "Ⓐ" and "☼" will light up.

5.3 Temperature Setting

Press "+" or "-" button under on status to increase or decrease set temperature by 0.5°C/1°C or 1°F; hold "+" or "-" button to increase or decrease set temperature by 0.5°C/1°C or 1°F every 0.3s. Please refer to 4.2.3 Parameter Setting for the setting method of the temperature setting interval in Celsius.

In Dry mode, when temperature is 16°C or 61°F, continuously press "-" button twice to decrease temperature to 12°C or 54°F (when save function is activated, the temperature in Dry mode can't be adjusted to 12°C or 54°F).

When the control method under Dry mode is humidity control, press "+" or "-" button to adjust the set humidity at 5% intervals. The humidity setting range is 45%~75%, and the default value is 65%. The humidity control method under Dry mode can only be set for the unit with this function. Please refer to 4.2.3 Parameter Setting for the setting method.

daitsu

NOTES:

① Only when the wired controller controls Atlas indoor units, can the setting temperature be adjusted by pressing "+" or "-" under Auto mode.

② When Absence function is activated, the setting temperature cannot be adjusted by pressing "+" or "-".

③ When the wired controller is connected with a Fresh Air In-door Unit, fresh air indoor unit code "FAP" will be displayed as shown below. Setting temperature won't be displayed and can't be adjusted via "+" or "-" button. The air outlet temperature in cooling or heating can only be set in the parameter setting status.

5.4 Fan Setting

(1) Under On status, pressing "FAN" button can set fan speed circularly as:

(2) Turbo function setting

In unit on status, press "FUNCTION" button to switch to Turbo function with Turbo function icon "TURBO" blinking, and then press "ENTER" button to start or cancel Turbo function.

When Turbo function is activated, Turbo function icon "TURBO ▂▄▆█" will be bright.

NOTES:

① Under Dry mode, fan speed is low and can't be adjusted.
② When the wired controller is connected with a Fresh Air Indoor Unit, fan speed of indoor unit will be high fan speed only. Fan speed of indoor unit can't be adjusted via "FAN" button.
③ If indoor unit's fan speed is set auto, indoor unit will change fan speed automatically according to room temperature in order to make the room temperature more stable and comfortable.

5.5 Timer Setting

The wired controller is equipped with two kinds of timer: general timer and clock timer. General timer is factory defaulted setting. Please refer to 4.2.3 Parameter Setting for the timer setting way.

5.5.1 General Timer

Unit On/Off after a desired hour can be set through general timer.

Set Timer: when timer is not set, press "TIMER" button to enter timer setting and "HOUR" icon is blinking. Press "+" or "-" button to adjust timer time. Press "TIMER" button to save the setting and then exit setting.

Cancel Timer: when timer is set, press "TIMER" button to cancel it.

daitsu

Timer setting range: 0.5~24h. Press "+" or "-" button to increase or decrease timer time by 0.5h; hold "+" or "-" button to increase or decrease timer time by 0.5h every 0.3s.

5.5.2 Clock Setting

Clock display: when the timer setting way is clock timer, timer zone displays system clock in unit On and Off status. The clock can be set at this time.

Clock setting: long press "TIMER" button for 5s to enter clock setting. Press "+" or "-" button to increase or decrease clock time by 1min; hold "+" or "-" button for 5s to increase or decrease clock time by 10min; hold "+" or "-" button for 10s to increase or decrease clock time by 60min. Press "ENTER" button or "TIMER" button to save the setting and then exit setting.

NOTE: It is not applicable to partial units.

5.5.3 Clock Timer

Unit On/Off at a certain time can be set through clock timer.

Set Timer:
(1)   Press "TIMER" button to enter timer on setting and the "ON" icon is blinking.
(2)   Press "+" or "-" button to adjust unit On time. Press "ENTER" button to finish setting.
(3)   Before pressing "ENTER" button, pressing "TIMER" button can save unit On time and then switch to unit Off time setting with "OFF" icon blinking.
(4)   Press "+" or "-" button to adjust unit Off time. Press "ENTER" button to finish setting.

Cancel Timer:

Press "TIMER" button to enter timer setting; press "TIMER" button again to switch to the setting of unit ON time or unit Off time; press "ENTER" button to cancel timer.

Press "+" or "-" button to increase or decrease timer time by 1min; hold "+" or "-" button for 5s to increase or decrease timer time by 10min; hold "+" or "-" button for 10s to increase or decrease 60min.

Clock Timer setting is as shown in fig. 5.3:

Unit is on and timer is not set

Press TIMER button to set unit On time

Press TIMER button to switch to unit Off time setting

Press "+" or "-" button to adjust unit On time

Press "+" or "-" button to adjust unit Off time

Press ENTER button to finish setting
Fig. 5.3 Unit On/Off time setting in unit On status

NOTE: It is not applicable to partial units.

5.6 Swing Setting

In unit on status, up & down swing function and left & right swing function can be set.
(1) Up & down swing function

Up & down swing function has two modes: simple swing mode and fixed-angle swing mode. In unit off status, press "SWING" button and "+" button together for 5 seconds to switch between simple swing mode and fixed-angle swing mode. Up & down swing icon "≩" will blink during switching.

1) When simple swing mode is set in unit on status, press "SWING" button to start or stop up & down swing.

2) When fixed-angle swing mode is set in unit on status, press "SWING" button to adjust swing angle circularly as below:

(closed) → ≩ → ` → ⌐) → ─) → _) →) → ₌) → ≣) → ≣) → ≩) → ≩)
(2) Left & right swing function*:

In unit on status, press "FUNCTION" button to switch to left & right swing function with left & right swing icon "⑪" blinking, and then press "ENTER" button to start or cancel left & right swing. When left & right swing is activated, left & right swing icon "⑪" will be bright.

5.7 Quiet Setting

Quiet Function: decrease the noise of indoor unit and achieve the quiet effect. Quiet function has two modes: Quiet mode and Auto Quiet mode. It is available only in Auto, Cooling, Dry, Fan, Heating, 3D heating, Space heating mode.

daitsu

Turn on Quiet Function: press "FUNCTION" button to turn to Quiet function and then Quiet icon "⌒" or auto quiet icon "⌒A" is blinking. At this moment, press "+" or "-" button to switch between quiet and auto quiet, and then press "ENTER" button to activate.

Turn off Quiet Function: press "FUNCTION" button to turn to Quiet function and then press "ENTER" button to cancel Quiet function.

NOTES:

① When Quiet function is enabled, indoor unit will operate at quiet fan speed. Fan speed is lowered so as to reduce the noise of indoor fan motor.

② When Auto Quiet function is enabled, indoor unit will change fan speed automatically according to room temperature. After room temperature reaches a set point, unit will operate at quiet fan speed.

5.8 Sleep Setting

Sleep Function: in this mode, the unit will operate according to the preset sleep curve to provide comfortable sleep environment.

Turn on/off Sleep Function: in unit On status, press "FUNCTION" button to switch to Sleep function and the Sleep icon "☾" will blink. Press "ENTER" button to turn on this function.

When Sleep function is activated, "☾" icon is bright and quiet or auto quiet mode is also activated.

Under Auto, Fan or Floor Heating mode, the Sleep function is not available.

5.9 Air Setting*

Air Function: Adjust the amount of indoor fresh air to improve air quality and keep indoor air fresh.

Turn on Air Function: When unit is on or off, press "FUNCTION" button and select Air. "🖾" icon will blink and the unit enters into Air setting. Temperature zone shows the level of Air setting, which can be adjusted by pressing "+" or "-" button. The adjustment range is 1~10. Press "ENTER" button to turn on Air function.

Turn off Air Function: When Air function is on, press "FUNCTION" button to select Air, then press "ENTER" button to cancel this setting.
NOTES:

① Air function is only effective for units with air function and fresh air motorized air valve (abbr. fresh air valve).

② The following table indicates the opening time of fresh air valve per unit of time (60 min) corresponding to the level of Air setting. Opening time of fresh air valve is the initial N minutes per unit of time. Example: The level of Air setting is set to 1, then unit starts timing and fresh air valve is open. 6 minutes later, fresh air valve is closed and unit keeps running. After timing for 60 minutes, unit restarts timing and fresh air valve is open again. 6 minutes later, the valve is closed and the cycle repeats.

Level of Air setting	1	2	3	4	5	6	7	8	9	10
Opening time of fresh air valve	60/6	60/12	60/18	60/24	60/30	60/36	60/42	60/48	60/54	Always on

NOTE: time indicated in the table: unit's operating time (min) / opening time of fresh air valve per operating time (min).

5.10 Save Setting

Save Function: Air conditioner can be operated in small temperature range by setting the minimum temperature under Cooling and Dry modes and setting maximum temperature under Heating, 3D Heating and Space Heating modes. Thus, energy saving can be realized.

Start up Save function for Cooling: When the unit is off, simultaneously press "TIMER" and "+" buttons for 5s, the buzzer will give out a sound and then unit will enter into Save setting mode. "$\textcircled{\$}$" icon is blinking. Mode icon is on. Press "MODE" button to switch to Cooling or Dry mode. Press "+" or "-" button to adjust the temperature limit for Save function; press "ENTER" button to start up Save function.

Fig. 5.4 shows how to set Save function for Cooling:

Press TIMER and "+" buttons for 5 seconds and set Save in OFF status

Press MODE button and select Cooling or Dry mode

Press ENTER button to activate Save function

Press "+" or "-" button to adjust the minimum temperature
Fig. 5.4 Save Setting for Cooling

daitsu

Start up Save function for Heating: When the unit is off, simultaneously press "TIMER" and "+" buttons for 5s, the buzzer will give out a sound and then unit will enter into Save setting mode. "⑤" icon is blinking. Mode icon is on. Press "MODE" button to switch to Heating or 3D Heating or Space Heating mode. Press "+" or "-" button to adjust the temperature limit for Save function. Press "ENTER" button to start up Save function.

After starting up save function, it will display "⑤" icon for all modes under on and off status.

Cancel save function:

When the unit is off, press "TIMER" and "+" buttons for 5s to enter into save setting, press "ENTER" button to cancel Save function of all modes.

NOTE:

When the Save function is turned on and then set temperature exceeds the limit value for Save function, "⑤" icon blinks three times and then buzzer will give out two sounds successively.

5.11 Filter Clean Reminder Setting
Filter Clean Reminder Function: Unit will remember its own operating time. When the setting time is up, this function will remind you to clean the filer. A dirty filter will result in bad heating and cooling performance, abnormal protection, bacteria gathering, etc.

Turn on Filter Clean Reminder Function: When unit is on, press "FUNCTION" button and select Filter Clean Reminder. "⑤" icon will blink. Press "+" or "-" button to adjust the cleaning level, of which the range is 00, 10-39. Press "ENTER" to turn on this function.

Turn off Filter Clean Reminder Function: When unit is on and this function has been turned on, press "FUNCTION" button and select Clean. Then "⊕" icon will blink. Set the cleaning level as 00 and press "ENTER" function to cancel this setting.

When Filter Clean Reminder time is up, "⊕" icon will light up to remind you to clean the filter. There are two ways to cancel filter clean reminding:

(1) Press "⏻" button twice within one second to cancel reminding and it will retime according to the original cleaning level.

(2) Press "FUNCTION" button to turn to Filter Clean Reminder Function, then press "ENTER" to cancel reminding, and it will retime according to the original cleaning level. The clean reminding can be cancel only when you didn't reset the cleaning level under the setting of Filter Clean Reminder Function.

NOTE:

Description on cleaning level: When setting the Filter Clean Reminder Function, timer zone will display 2 digits, of which the former indicates the pollution degree of operating place and the latter indicates the operating time of indoor unit. There are 4 types of situations:

Cleaning Level	Description of Levels
Turn off Clean	Timer zone shows 00.
Slight Pollution	The former digit shows 1 while the latter one shows 0, which indicates the accumulating operating time is 5500 hours. Each time the latter digit increases 1, the operating time increases 500 hours. When it reaches 9, it means the operating time is 10000 hours.
Medium Pollution	The former digit shows 2 while the latter one shows 0, which indicates the accumulating operating time is 1400 hours. Each time the latter digit increases 1, the operating time increases 400 hours. When it reaches 9, it means the operating time is 5000 hours.
Heavy Pollution	The former digit shows 3 while the latter one shows 0, which indicates the accumulating operating time is 100 hours. Each time the latter digit increases 1, the operating time increases 100 hours. When it reaches 9, it means the operating time is 1000 hours.

5.12 X-FAN Setting

X-fan Function: If unit is turned off under Cooling or Dry mode, the evaporator of indoor unit will be dried off automatically to prevent bacteria and mould from gathering.

Under Cooling or Dry mode, press "FUNCTION" button to select X-fan. "〰" icon will blink. Then press "ENTER" button to turn on/off this function.

5.13 Health Setting*

Health Function: Control the air purification module which can purify air. This function cannot be used under Floor Heating mode.

When unit is on, press "FUNCTION" button to select Health. "❄" icon will blink. Then press "ENTER" button to turn on/off this function.

5.14 I-DEMAND Setting*

I-DEMAND Function: The unit will operate in the SE mode to save energy. I-DEMAND function can be only be used under cooling mode.

Under Cooling mode, press "FUNCTION" button to select I-DEMAND. "❀" will blink. Then press "ENTER" button to turn on/off this function.

NOTE: It is only applicable to Atlas unit.

5.15 Absence Setting

Absence Function: This is used to maintain indoor temperature so that unit can realize fast heating after it is turned on. This function can only be used under Heating mode.

Under Heating mode, press "FUNCTION" button to select Absence. "⌂" icon will blink. Then press "ENTER" button to turn on/off this function.

5.16 Remote Shield Function

Remote Shield Function: Remote monitor or central controller can disable the relevant functions of wired controller so as to realize the function of remote control.

daitsu

When the remote monitor or central controller activates Remote Shield on the wired controller, "⌂" icon will show. If user wants to control through the wired controller, "⌂" icon will blink to remind that these controls are disabled.

5.17 Child Lock Function

When unit is turned on normally or turned off, pressing "+" and "-" button together for 5 seconds will turn on Child Lock function. "⌂" will show on the display. Pressing "+" and "-" together again for 5 seconds to turn off this function.

All the other buttons will be disabled when Child Lock function is on.

5.18 Gate-Control Function

When there is Gate-control System, user can insert a card to turn on the unit or pull off a card to turn off the unit. When the card is re-inserted, the unit will recover the operation as state in memory. When the card is pulled off (or improperly inserted), "⌂" icon will show, neither remote control nor operation of wired controller will be effective and icon "⌂" will be flickering.

NOTE: This model cannot be connected with gate control system on its own because it cannot detect gate control signal directly. To realize gate control display and gate control function, it has to be used with wired controller that includes gate control signal detecting function (used as master and salve wired controller).

5.19 Inquiry of Indoor Temperature with One Button

In the homepage, hold "ENTER" button for 5 seconds, and the wired controller will display the indoor temperature for 5 seconds. Within the 5 seconds, it can quit displaying the indoor temperature immediately and be responded to the instructions as usual after pressing any buttons.

5.20 Auto Clean Function

In the homepage, hold "MODE" and "TIMER" buttons for 5 seconds to turn on or turn off Auto Clean function. When Auto Clean function is turned on while the unit has not entered into the Auto Clean mode, "⟦⋅⟧" icon is always on; when the unit has entered into the Auto Clean mode, "⟦⋅⟧" will be flickering and timer zone will display the remaining time of Auto Clean mode.

Press "⟳" button to exit the Auto Clean mode, "⟦⋅⟧" icon will be off when the unit has exited the Auto Clean mode. All other buttons will not be activate when "⟦⋅⟧" icon is always on or flickering.

Fig. 5.5 shows how to turn on Auto Clean function:

daitsu

Press MODE and TIMER buttons for 5 seconds to set Auto Clean function in ON or OFF status

After unit has entered into Auto Clean mode, 🔄 icon will be flickering and timer zone will display the remaining time of Auto Clean mode
Fig. 5.5 Turn on Auto Clean function

NOTES:

① This function is only applicable to the unit with Auto Clean function.

② When the unit is faulty, Auto Clean function cannot be turned on.

③ During Auto Clean function is on, there will be phenomenon, such as frosting of evaporator of indoor unit, sound of liquid flow, and fluctuation of indoor temperature and humidity, which affects the comfort. Auto Clean function is recommended to be used when there are no people in the room. In order to ensure the cleaning effect, it is recommended to turn on Auto Clean function every three months.

④ The auto clean effect will be weakened if indoor environment humidity is low.

⑤ It is recommended to use Auto Clean function at the outdoor ambient temperature of 10ºC~40ºC. Otherwise, Auto Clean function will exit in advance, which is the normal phenomenon.

⑥ When an indoor unit in VRF system has entered into the Auto Clean mode, all other units in the system will operate under the auto clean mode.

⑦ When the wired controller controls Atlas unit, Auto Clean function can only be turned on under OFF status and timer zone do not display the remaining time of the Auto Clean mode.

5.21 WiFi Function Setting

"DAITSU+" App can be used to control wired controller ACCD_WC6. Please scan the QR code or search "DAITSU+" in the application market to download and install it. When "DAITSU+" App is installed, register the account and add the device to achieve long-distance control and LAN control of Daitsu smart home appliances.

APP can only set some common functions of wired controller: ON/OFF, mode, set temperature, FAN speed, etc.

When using the APP for the first time, please reset the WiFi function of wired controller (reset WiFi to ex-factory setting): when the unit is off, hold "FUNCTION" and "FAN" buttons for 5 seconds in the homepage; when the temperature display area displays "oC" for 5 seconds, it indicates that the current reset is valid. Then add the device in APP.

daitsu

NOTES:

① This function is only applicable to wired controller ACCD_WC6.

② If the device is offline or router's name and password have been changed, please reset WiFi and add the device again.

③ WiFi networking performance is related to the distance between the wired controller and the router and the obstacles between them. During the installation process, the distance between the wired controller and the router should be as close as possible, and the obstacles should be as little as possible. If the WiFi signal is not good, use the WiFi signal enhanced router. The specific situation depends on the actual installation.

④ For more information, please refer to "Help" in App.

6 Error Display

When there occurs any error during operation, the temperature display zone on the wired controller will show error codes. If several errors happen at the same time, error codes will show on the display repeatedly.

Ⓢ **NOTE:** If error occurs, please turn off the unit and send for professionals to repair.
